

## **Timer For Electric Free Flight**

For those who've been frustrated at the lack of performance from your Mini-6 and similar motors, Stew Meyers has invented 1.4 gram electronic timer. This timer allows you to charge your batteries to maximum or peak charge without fear of the motor running forever and the airplane flying OOS. When you charge the battery only to the extent that the motor will run 60 seconds or so, you are not getting full power as you would have with the battery fully charged. The timer allows you to time the motor run between 15 and 150 seconds.

The timer is available through HiLine, P. O. Box 11558, Goldsboro, NC 27532. The price is \$13.95 plus postage
